

Intellectual Property in Cyber Security

Name: Vivek Raj Yadav

S.No :- 60 (A6)

Course: B.Tech

Introduction

- Intellectual Property (IP) means creative work like software, data, and designs
- In cyber security, IP needs protection from hacking and misuse
- It is very important for companies and developers

Importance of IP in Cyber Security

- Protects valuable digital assets
- Prevents data theft and piracy
- Maintains company reputation
- Encourages innovation

Types of Intellectual Property

- Copyright** – protects software and digital content

- Patent** – protects new inventions and technologies

- Trademark** – protects brand name and logo

Conclusion

- IP is very important in digital world
- Cyber security helps protect it
- Both are essential for safe technology use

THANK YOU
